

# SVARTVIKKA U

## ALTERNATIVE VERSION OF THIS CUBIST STYLE HOME

This is the alternative version of this home, suited to a sloping site where the entry floor is the lower level. This version gives a greater useable space as the design allows the garage roof to be used as a roof terrace of over 40 square metres.

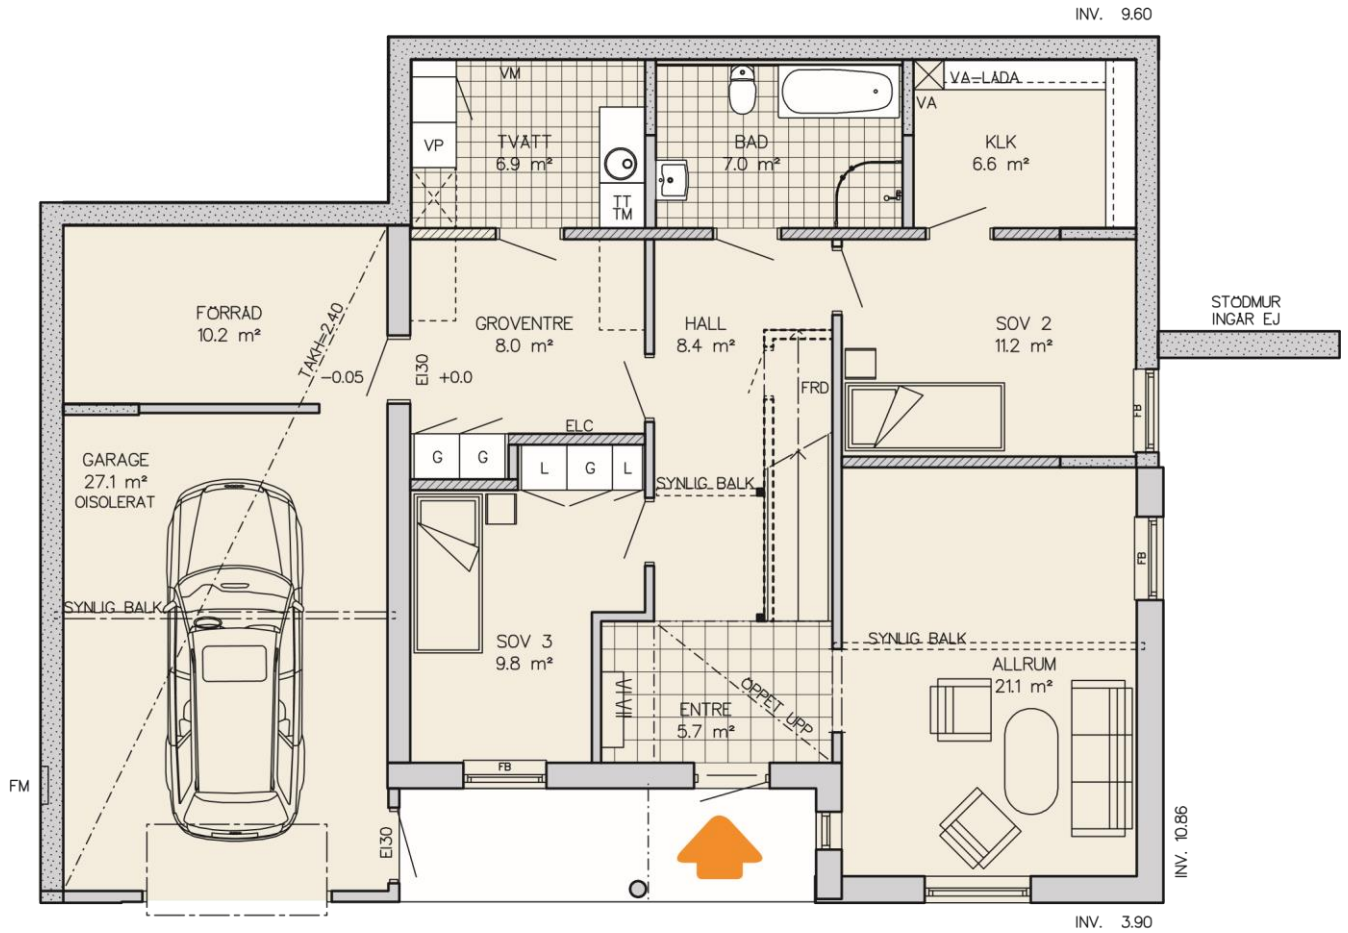

In this version the entrance and garage are at lower ground level and this floor contains two bedrooms, bathroom, utility and store rooms plus a sitting room. The garage has a dividing wall at the rear giving a useful workshop area, which also has a door into the house.

On the upper floor, the master bedroom has an adjacent shower room and an office could serve as a fourth bedroom if required. The open plan dining kitchen, formal dining area and living room has a double door out to the roof terrace, access to which can also be gained from the office.
